

Connect the Dots to Find Buddy

December 2006

Springbrook Creek Wetland and Habitat Mitigation Bank Project

Activity Book

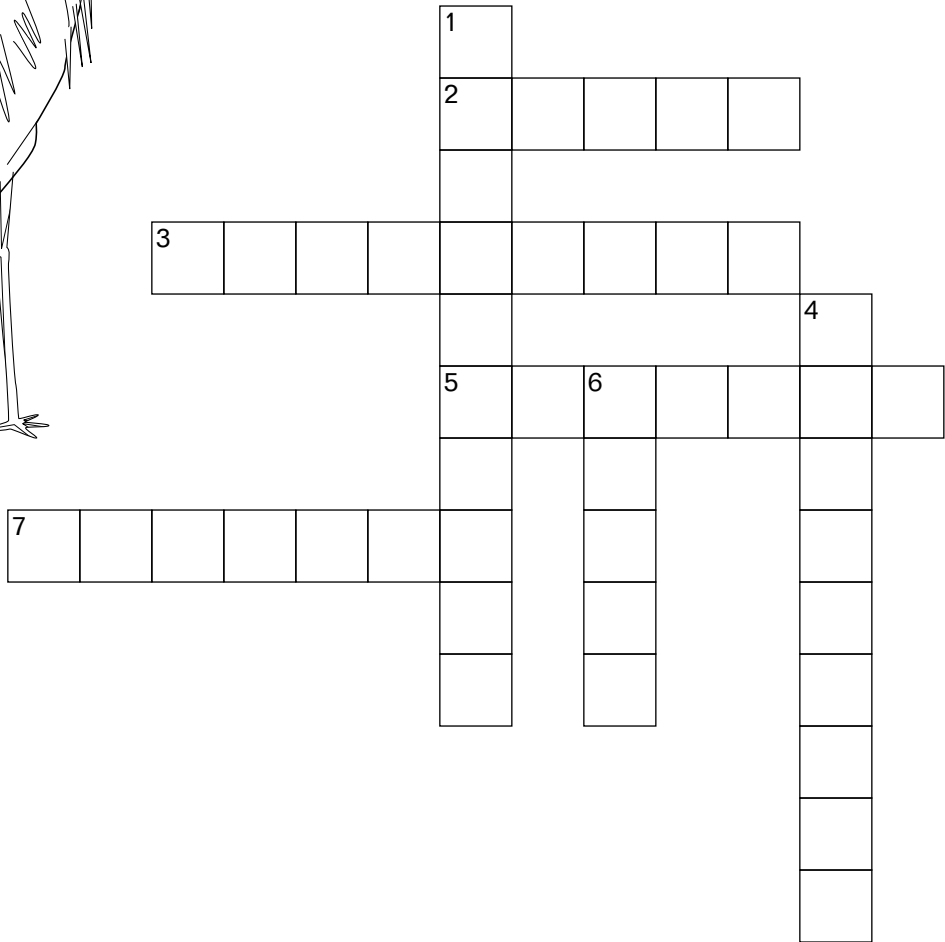

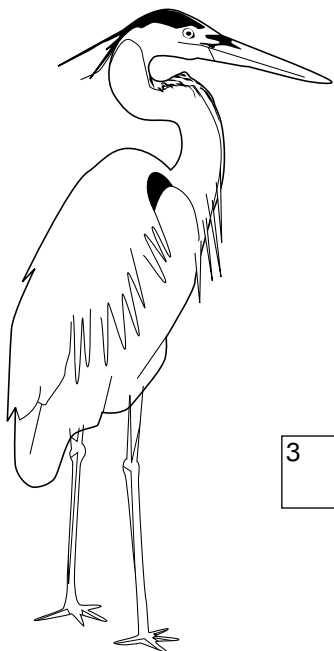

Hey, Kids...

**Join
Buddy
the blue heron**

*for a tour through the
Springbrook Creek
Wetland & Habitat
Mitigation Bank
Project site*

Help Buddy Fill in the Answers

Across

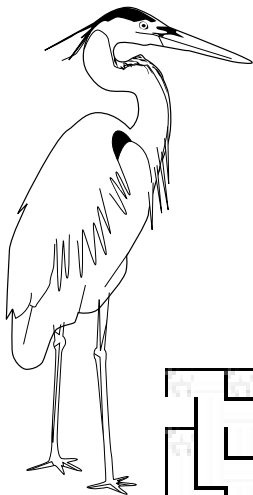

- 2. A type of fish that you may see in Spingbrook Creek
- 3. An area of land surrounded by mountains where rivers and streams collect
- 5. Another word for swamp, marsh or bog
- 7. The environment where animals live

Down

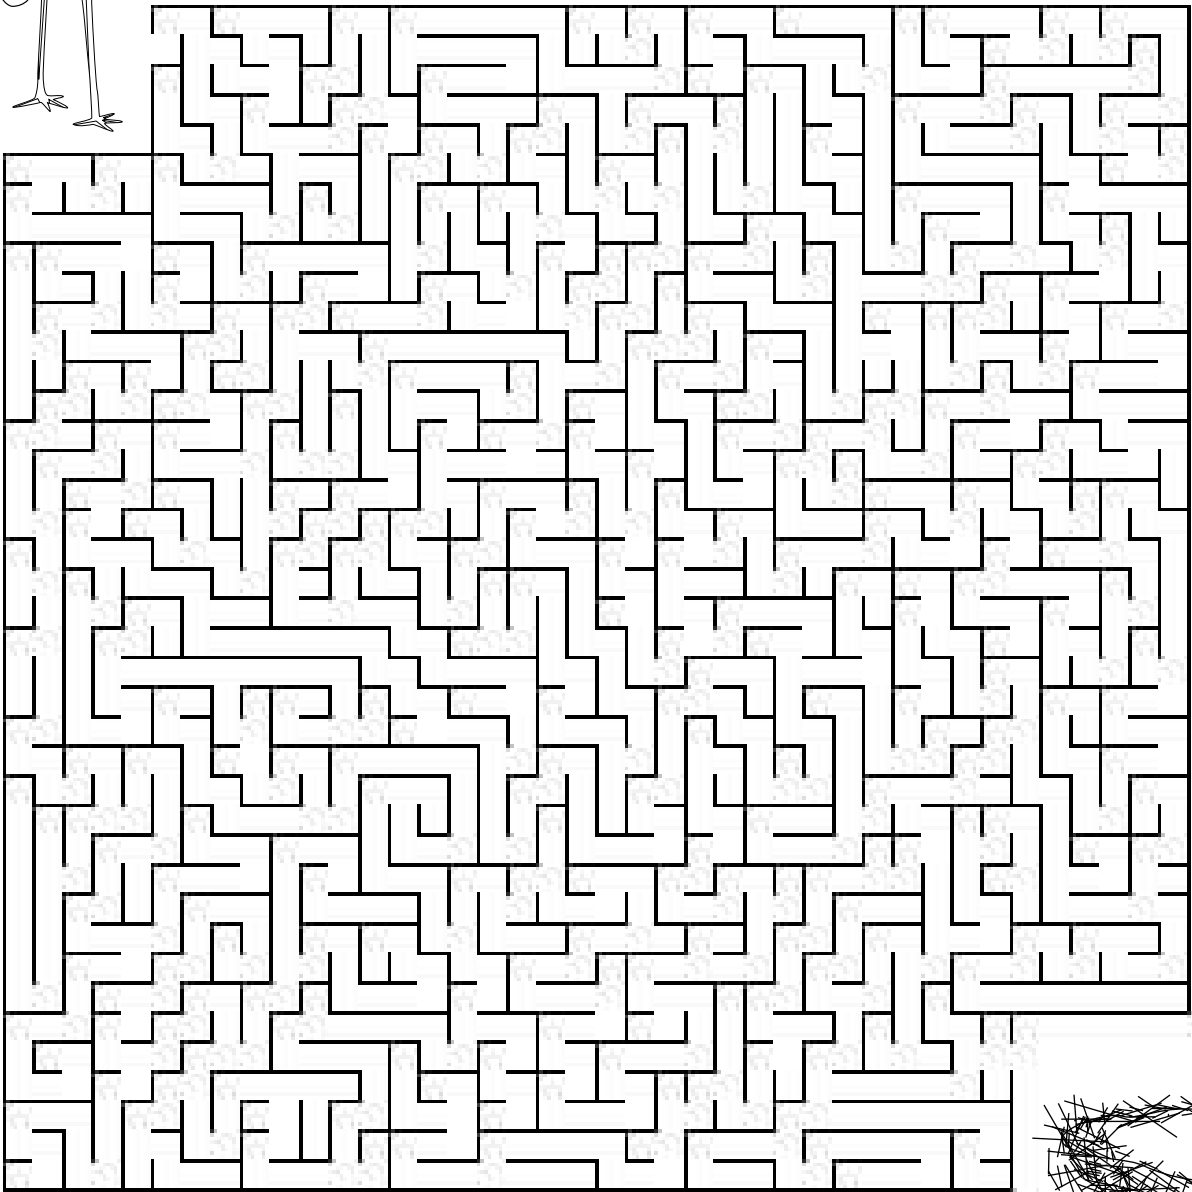

- 1. Water that comes from rain or snow that runs off rooftops or streets
- 4. A type of plant/berry found at Springbrook Creek
- 6. A path through the woods or wetlands

Hint: Answers are found in this activity book

Help Buddy Get to his Nest

*Guide Buddy through the Springbrook Creek
Wetland & Habitat Mitigation Bank Project site*

Help Buddy Figure Out the Phrase

Unscramble the letters of the jumbled up words and put the phrase at the bottom of the page together, letter by letter.

Where do Buddy & his Friends Live?

Match the animal with its habitat on the opposite page.

Coyote

Coyotes are very adaptable mammals often seen in rural and urban habitats of deserts, fields and farmlands. They use ravines and other natural corridors to travel between developed areas.

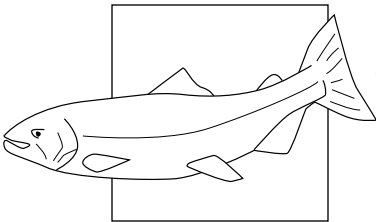

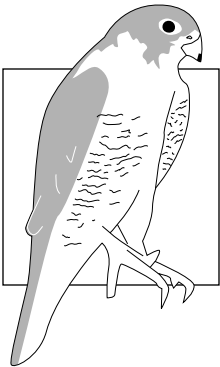

Red-tailed Hawk

Red-tailed Hawks are found in North America and scattered through Central America and the West Indies. They inhabit open fields and deserts that are interspersed with woods or bluffs, urban areas, mountain forests, and tropical rainforests. Northern birds migrate south during the winter.

Raptors

Eagles, hawks, buzzards, harriers, kites, falcons, and owls are all raptors. The destruction of raptor habitat through clearing of indigenous forests, grasslands and wetlands has contributed to the decline of many raptors.

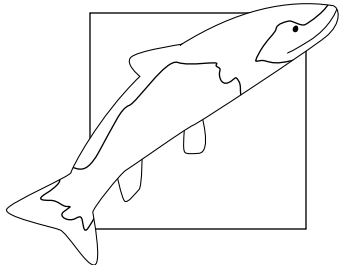

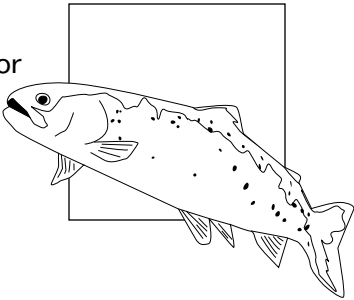

Steelhead Salmon

Adult steelhead need to have access to the streams in which they were born. This means that streams must be free of barriers to migration in the upper reaches of tributaries. Adults also need access to spawning gravel in areas free of heavy sedimentation with adequate flow and cool, clear water. Escape cover such as logs, undercut banks, and deep pools for spawning adults is also important.

Cutthroat Trout

Simply stated, cutthroat trout are widely accepted as an indicator species for their habitat. Where they thrive their habitat's ecosystem is in good health (clean, clear, highly oxygenated water).

Chinook Salmon

Freshwater streams and estuaries provide important habitat for chinook salmon. The Chinook are listed as an endangered species under the Endangered Species Act.

Great Blue Heron

Hérons build nests in a variety of tree species including: alder, cedar, hemlock, Douglas fir, spruce, cottonwood, and hawthorn. But most often, herons nest in big alders over 75 feet tall.
